**Amendments to the Claims**:

Please cancel Claims 1-4, 7, 11, 12, 15 and 19-20, without prejudice and without disclaimer of subject matter. This listing of claims will replace all prior versions and listings of claims in the application:

**Listing of Claims**:

1-4     CANCELLED.

5.      (Currently Amended) ~~The~~ A method for adjusted monitoring in a relational environment ~~of claim 3, wherein said detecting step comprises~~ the method comprising the steps of:

measuring resource values in a coupled application;

detecting an indication arising from said measurement;

locating an application related to said coupled application; and,

transmitting a notification of said indication to a performance monitor coupled to said related application;

wherein said detecting step comprises comparing said measured resource values to a pre-defined threshold; and, where said measured resource values exceed said threshold, declaring an indication.

6.      (Currently Amended) ~~The~~ A method for adjusted monitoring in a relational environment ~~of claim 3, wherein said detecting step comprises~~ the method comprising the steps of:

_____ measuring resource values in a coupled application;

_____ detecting an indication arising from said measurement;

_____ locating an application related to said coupled application; and,

_____ transmitting a notification of said indication to a performance monitor coupled to said

related application;

_____ wherein said detecting step comprises comparing said measured resource values to a pre-

defined threshold; and, where said measured resource values fail to meet said threshold,

declaring an indication.

7.      CANCELLED.

8.      (Currently Amended) ~~The~~ A method for adjusted monitoring in a relational environment

~~of claim 3,~~ ~~further~~ the method comprising the steps of:

        measuring resource values in a coupled application;

        detecting an indication arising from said measurement;

        locating an application related to said coupled application;

        transmitting a notification of said indication to a performance monitor coupled to said

related application;

        detecting said related application through a configuration of said coupled application;

and,

        recording said detected relationship in said registry.

9.      (Currently Amended) ~~The~~ A method for adjusted monitoring in a relational environment ~~of claim 3, further~~ the method comprising the steps of:

measuring resource values in a coupled application;

detecting an indication arising from said measurement;

locating an application related to said coupled application;

transmitting a notification of said indication to a performance monitor coupled to said related application; and,

adjusting performance monitor parameters responsive to said detection.

10.     (Original) The method of claim 9, wherein said adjusting step comprises the steps of:

loading an adjustment policy specifying limitations on adjusting performance monitor parameters in response to specific indications; and,

limiting said adjustment of said performance monitor parameters based upon said policy.

11.     CANCELLED.

12.     CANCELLED.

13.     (Currently Amended) ~~The~~ A machine readable storage having stored thereon a computer program for adjusted monitoring in a relational environment, the computer program comprising a routine set of instructions for causing the machine to perform ~~of claim 11, wherein said detecting step comprises~~ the steps of:

measuring resource values in a coupled application;

detecting an indication arising from said measurement;

locating an application related to said coupled application; and,

transmitting a notification of said indication to a performance monitor coupled to said

related application;

wherein said detecting step comprises comparing said measured resource values to a pre-

defined threshold; and, where said measured resource values exceed said threshold, declaring an

indication.

14.     (Currently Amended) ~~The~~ A machine readable storage having stored thereon a computer

program for adjusted monitoring in a relational environment, the computer program comprising a

routine set of instructions for causing the machine to perform ~~of claim 11, wherein said detecting~~

~~step comprises~~ the steps of:

measuring resource values in a coupled application;

detecting an indication arising from said measurement;

locating an application related to said coupled application; and,

transmitting a notification of said indication to a performance monitor coupled to said

related application;

wherein said detecting step comprises comparing said measured resource values to a pre-

defined threshold; and, where said measured resource values fail to meet said threshold,

declaring an indication.

15.    CANCELLED.

16.    (Currently Amended) ~~The~~ A machine readable storage having stored thereon a computer

program for adjusted monitoring in a relational environment, the computer program comprising a

routine set of instructions for causing the machine to perform ~~of claim 11, further comprising~~ the

steps of:

    measuring resource values in a coupled application;

    detecting an indication arising from said measurement;

    locating an application related to said coupled application;

    transmitting a notification of said indication to a performance monitor coupled to said

related application;

    detecting said related application through a configuration of said coupled application;

and,

    recording said detected relationship in said registry.

17.    (Currently Amended) ~~The~~ A machine readable storage having stored thereon a computer

program for adjusted monitoring in a relational environment, the computer program comprising a

routine set of instructions for causing the machine to perform ~~of claim 11, further comprising~~ the

steps of:

    measuring resource values in a coupled application;

    detecting an indication arising from said measurement;

locating an application related to said coupled application;

transmitting a notification of said indication to a performance monitor coupled to said related application; and,

adjusting performance monitor parameters responsive to said detection.

18.     (Original) The machine readable storage of claim 17, wherein said adjusting step comprises the steps of:

loading an adjustment policy specifying limitations on adjusting performance monitor parameters in response to specific indications; and,

limiting said adjustment of said performance monitor parameters based upon policy.

19.     CANCELLED.

20.     CANCELLED.
